## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09/23/2004 has been entered.

The amendment filed on 03 September 2004 is acknowledged. Claims 64-72 are new, pending, and examined on merits.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office Action.

All claims presented in the last Office action are cancelled, therefore the rejection stated in the previous Office action is moot.

This Office action contains new grounds of rejection.

### ***The Following Are New Grounds of Rejections***

#### ***Claim Rejections - 35 USC § 112***

Claim 68 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 68 depends on claim 64. It is not clear whether "the sample" in claim 68 further limits "a sample" in step i) or step iii).

Art Unit: 1642

Claim 68 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. This new matter rejection is made due to the limitation "a membrane-bound form of an isolated polypeptide". Applicant states that support for the new claims are found throughout the specification. However, the Office is not able to find the support in the specification as originally filed. Applicant is kindly requested to find the support in the specification as originally filed.

Claims 64, and 68-72 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for an assay using an isolated SEQ ID NO:2 protein or a cell comprising SEQ ID NO:2 protein, does not reasonably provide enablement for an assay using a membrane-bound form of an isolated protein. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims.

The factors considered when determining if the disclosure satisfies the enablement requirement and whether any necessary experimentation is "undue" include, but are not limited to: 1) nature of the invention, 2) state of the prior art, 3) relative skill of those in the art, 4) level of predictability in the art, 5) existence of working examples, 6) breadth of claims, 7) amount of direction or guidance by the inventor, and

8) quantity of experimentation needed to make or use the invention. *In re Wands*, 858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988).

This scope of enablement rejection is made because the claims are interpreted as drawn to an assay using a membrane bound form of an isolated polypeptide.

The specification does not teach how to make a membrane bound form of an isolated polypeptide.

Voet et al., (Biochemistry, John Wileys & Sons, 1990, pages 284-289) teach that a membrane protein is modified with oligosaccharide or other molecules (note Fig. 11-21, for example). The specification only teaches the primary sequence of SEQ ID NO:2. It is noted that law requires that the disclosure of an application shall inform those skilled in the art how to make the alleged discovery, not how to screen it for themselves.

Considering the unpredictable state of art, limited guidance, no examples in the specification how to make the instantly claimed invention, it is concluded that undue experimentation is required to practice the invention.

### ***Allowable Subject Matter***

Claims 65-67 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
